

## **A Bird's Eye View of the ARIES Approach**

The ARIES system utilizes a wide range of cutting edge technologies from automated pattern scale detection and classification to Bayesian belief networks, machine learning, decision theory, dynamic model building, rule engines, multi-criteria analysis, and more. Take a look through the subpages on this part of the site to get a closer look at just how ARIES connects these tools together to make ecosystem service assessment and valuation easier and more comprehensive than ever before.
